Introducing EELISA, the European Engineering Learning Innovation and Science Alliance at the Budapest University of Technology and Economics

EELISA aims to transform European higher education while strengthening links between engineering and society.

In 2020, BME joined a new and progressive initiative in the area of international relations when it joined forces with eight other prestigious European universities to work as part of the EELISA consortium to start joint degree programmes and research projects while making efforts to achieve the long-term goal of a single cross-border European accreditation in engineering. This cooperation allows BME students to study at the universities of Pisa, Erlangen, Istanbul, Paris, Madrid and Bucharest.

EELISA’s activities at BME and international consortium will be presented at the event, as well as information on related large-scale corporate and university collaborations.

Date:
June 23rd 2021 (Wednesday) 10 a.m. to 2 p.m.

More information and registration from May 10, 2021:
